Hello,

Here is what I did this week for the assignment.

I am quite unsatisfied because it doesn't work. I needed almost all the week just to understand the programming language and how to manage this project, since I had never programmed in javascript before and I just had a few basis about html and php.

But at least now I have understood how it works, even if I have some trouble to use it. There must be something wrong with my code because it doesn't work, and I cannot find what it is. Indeed I took the example of the tutorial from facebook that you sent me and tried to do it for the tasks but something must be missed.

I created a function test.js just to verify if the problem was when I called the function or something else. I just noticed that when I write « test : function(){...} », it didn't work, so I had to write « function test(){...} », despite what is written on the tutorial from facebook.

Also, I wondered how I can create an object in an object, like a task in a list. The tutorial only shows how to create an object, but I don't really know how a task can be part of a list, for example.

I also tried to ask for a login and a password to connect but I don't understandd why it didn't work either. I used the php and closed the balise but the computer doesn't understand the closing of the balise, and uses html instead of php.

I would really like to keep going on this project and try to finish it, if ever you could find the time to help me. This assignment was very interesting and I learned a lot of things but unfortunately I didn't have enough time, with my classes and everything. I didn't find a lot of informations about how to use React on the Internet, but this way of programming seems really efficient and I would like to learn it more.
I hope you will see that I did the most I could do for one week, and that I could progress and finish it if I keep going.

Thank you for this interesting work, that I would never have done otherwise,

Aurore Berne
